

// Environmental Policy

The BIG Group (the "Group") is a public company traded in Israel, specializing in investment, development, and project management in the areas of commerce, logistics, offices, and renewable energy, in Israel and overseas.

The Group is committed to promoting its activities while continually striving to create a more sustainable and healthier environment, for the sake of the planet and future generations. We work towards these goals at all times, in a variety of ways, and aim to minimize our negative impact on the environment by focusing on all of the potential implications of our operations during the construction and operation of the properties we own.

We are committed to making every possible effort to reduce the impact of our activities on the environment and raise awareness of the protection of the environment. We include environmental considerations in our decision-making processes and endeavor to find solutions during the planning, development, and management of the sites where we operate.

We regularly monitor environmental regulations and laws and work to attain full compliance. We also routinely measure and review the effects of our activities on the environment, in order to strive for constant improvement.

We dedicate attention to all of the environmental aspects of our activity and manage these issues responsibly, based on a sustainable approach:

- **Managing resource consumption** – We are committed to more efficient consumption of the energy and water resources required for the Group's operations, to reduce negative environmental impacts in general and impacts on climate change in particular.
- **Protecting the environment and biodiversity** – We take proactive measures for the protection of the environment and of flora and fauna during the planning, development, and construction of new properties and in the operation and maintenance of existing properties.
- **Managing waste** – We reduce the quantity of waste sent to landfills through a preference for solutions based on recycling or reclamation. Waste is removed safely and responsibly by licensed suppliers, to prevent environmental hazards.
- **Environmental risks** – We explore and identify possible risks arising from our activity, in the short and long term, to minimize harmful effects on the environment.
- **Supply chain** – We grant precedence to suppliers, subcontractors, and business partners who share our environmental policy values.

- **Transparency** – We manage environmental issues transparently, in full collaboration with the Group's employees and stakeholders. The Group also works with the tenants in its shopping centers to uphold these values, by providing guidance on operating stores in ways that reduce environmental impacts and by promoting joint projects to benefit the environment.
